1. Applicant's election with traverse of claims 16-26 in the reply filed on June 5, 2006 is acknowledged. The traversal is on the ground(s) that there is no burden in searching plural inventions in the same class and subclass. This is not found persuasive because the different claimed features require different search terms in electronic searching and the concomitant analysis of different references for different issues of patentability.

The requirement is still deemed proper and is therefore made FINAL.

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.

Art Unit: 1743

3. Resolving the level of ordinary skill in the pertinent art.
  4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
5. Claims 16-26 are rejected under 35 U.S.C. 102(e) as being anticipated by Anderson Jr. et al US006468804B1.
- Anderson teaches a housing 15, a source of electrolyte-containing eluent 10, electrodes 22, 23, a chromatographic column 14, injector 12 upstream of the column, a detector 21, barriers 26a,b and flow-through ion exchange medium 31. The flow connections and electrode positions are as claimed. The housing also constitutes a suppressor. By virtue of the recycle loop, the suppressor/purifier is both upstream and downstream of the column, the injector and the eluent source. See Figures 1 and 3.
6. Applicant's arguments filed February 13, 2006 have been fully considered but they are not persuasive.
7. Applicant's arguments with respect to the rejection under 35 USC 112, first paragraph are persuasive.

8. Applicant argues that there is no eluent purifier upstream of the column in Anderson, but by virtue of the recycle loop, the suppressor/purifier is both upstream and downstream of the column, the injector and the eluent source. The suppressor meets all the structural limitations of the instant purifying channel and housing, as well as constituting a suppressor as in claim 26.

9. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
